

HT2

HIGH TOUCH, HIGH TECH

e-screening & brief intervention for behavioral health in pregnancy*

WHAT IS HT2?

HT2 is an easy-to-use mobile app available to clinics servicing expecting mothers in Michigan. Prior to a new intake appointment, the app will connect women to behavioral health services via tele-counseling, either at home or in the waiting room.

WHY USE HT2?

HT2 can help clinics and patients in a variety of ways:

- Identify behavioral risks through evidence-based screening
- Offer patients a brief evidence-based motivational intervention
- Provide clinics with scored reports on patient responses and needs and aggregate, clinic-wide data to track patient progress
- Connect patients to available social and behavioral services

HOW MUCH DOES IT COST?

HT2, including iPads and other supplies, is provided at no cost to either clinics or patients. Clinics who commit to referring all new pregnancy intakes to HT2 can receive a stipend to help cover the cost of meetings, staff training, etc.. Additionally, clinics may bill insurance for use of evidence-based screeners.
